New Pressure Equalizing Pad

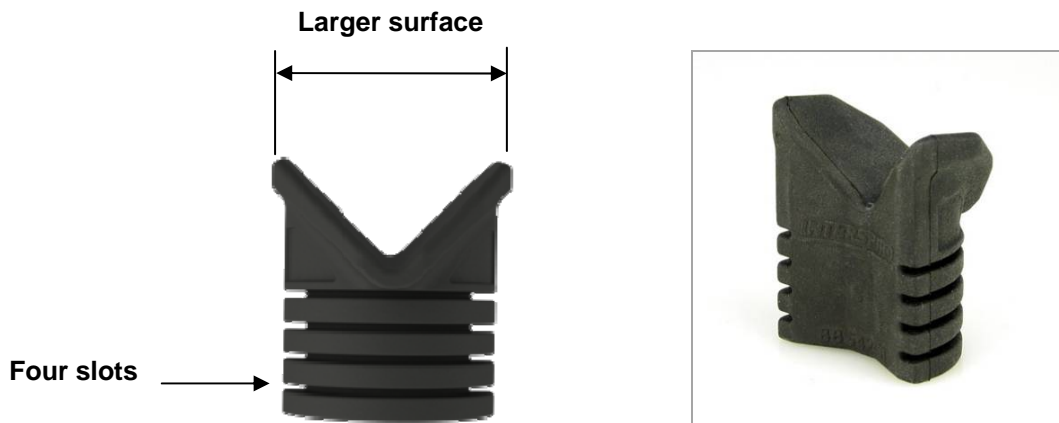

LIDINGÖ December 1, 2010

ANNOUNCEMENT

INTERSPIRO have introduced a new pressure equalizing nose pad for the DIVATOR Full Face Mask. This new nose pad is designed with four slots and a larger contact surface.

The four slots make it easier to adjust the position of the pad inside the mask.

The larger contact surface on top of the pad (toward the diver's nose) enables easier and more comfortable pressure equalizing.

The old type of nose pad (P/N 460 190 513) can still be bought separately, for customers who use mask-mounted microphones that require extra space.
